

1 **ABSTRACT OF THE DISCLOSURE**

2 A foldable bicycle has a frame, a front fork, a front wheel, a stem, a
3 handlebar, a handlebar positioning device, a seat post, a seat, a rear fork, a rear
4 wheel, a drive assembly, a shock absorber and a rear fork positioning device.

5 The handlebar positioning device is mounted between the front fork and the stem
6 so the stem can be folded toward the frame. The rear fork positioning device is
7 mounted between the shock absorber and the rear fork so the rear fork can be
8 folded toward the frame. Accordingly, the bicycle can be folded to reduce the
9 space for storing or transporting the bicycle, and the structure of a foldable
10 bicycle with a shock absorber is simplified.
